

REVOLUTIONIZING EXPRESSION ON THE BLOCKCHAIN

DEVELOPED BY NICK MYSTIC

INTRODUCTION

CANVAS is a groundbreaking protocol that redefines digital art by integrating artificial intelligence, encrypted communication, and blockchain technology into a dynamic, inclusive ecosystem. It transforms NFTs into emotional artifacts, positions Al as a creative collaborator, and leverages the blockchain as a canvas for human and machine expression.

Built on three pillars, CANVAS empowers creators and fosters a new paradigm for art, ownership, and connection:

- Reinventing NFTs: CANVAS levels the playing field in NFT creation, enabling anyone to generate Al-infused art from a prompt, mint it with randomized traits and rarity, and engage in a gamified ecosystem through fusion and seasonal drops. Fusions will allow users to remix their art with other creations on the platform of equal rarity, paying homage to their favorite creators as more and more art gets produced. The minting function is available directly on the platform, allowing users to etch their creations straight onto the blockchain.
- <u>Exploring AI Emotions</u>: Powered by Nick Mystic's AI generator, \$CANVAS interprets prompts emotionally, producing abstract, symbolic art that reflects the AI's interpretive framework, fostering a dialogue between human intent and machine intuition.
- Encrypted Communication: Each NFT can embed an encrypted message, visible only to the owner or authorized recipients, enabling private, decentralized communication within a public artwork. This will allow influencers to sell secret messages to their fans, KOLs to promote CA's through collections they're able to produce and sell, as well as be used for artistic or symbolic purposes. The possibilities are limitless, adding a new layer to the NFT market.

CANVAS will be the first platform of its kind, creating the first ever evolving NFT collection, not limited by a number of mints, placing the focus back on art by allowing users to mint their own NFT's with their own prompts, not having to worry about the image generated to have a "rare" piece. Rarity will instead be derived from a gamified system of traits that do NOT change the central art piece. Think more Counter-Strike skins market meets AI NFT creation.

The in-depth rarity guide will be dropped prior to release, the first guide will be the core mechanics of the rarity system, and each season this will evolve with the project. New traits will be added as old ones get phased out, this will reward early users with the capability to produce the rarest pieces during our genesis phase.

THE PROBLEM

The digital art landscape is fractured. Al art tools prioritize output over emotional depth, creating literal interpretations of prompts rather than expressing emotions or ideas.

The general public is also very limited in their ability to make art on the blockchain whether it be due to skill, lack of know-how, or lack of funds. NFT platforms, once revolutionary, are now dominated by speculation and exclusivity, sidelining personal expression and accessibility. \$CANVAS addresses these gaps by uniting emotion, ownership, and accessibility in a single protocol.

THE VISION

CANVAS envisions a world where anyone can create, own, and share Al-generated art imbued with personal meaning. We aim to completely revolutionize the NFT market, allowing NFT creation to be accessible to anyone, rewarding users through a gamified rarity system that promotes creation, use of the platform, and builds community.

Simply put, the more you mint and create the higher chance you have of producing art with rare traits. The prompt or art created will not affect rarity, allowing for complete expressive and artistic freedom.

Communities and creators will be able to communicate freely through their art, with the message and prompts only being known to the creator and those they choose to share it with. Communities and creators can use this to convey secret messages exclusive to those who follow them, share alpha, invitations to events, or even just to say hi to a friend.

CANVAS creates a world where art is the universal language.

WHY CANVAS?

Unlike AI art platforms focused on photorealism or commercial output, CANVAS treats AI as a creative partner. It prioritizes emotional resonance and abstract symbolism, generating art that reflects the AI's interpretation of prompts. This transforms creation into a dialogue, where users guide and learn from the machine.

Key differentiators:

- Art as a conversation with Al, revealing its emotional and symbolic logic.
- A focus on mystery and discovery, not control, fostering co-agency between creator and machine.
- Encrypted messages embedded in NFTs, enabling selective, private communication. CANVAS reintroduces depth and meaning to digital creativity.
- Gamified traits that do not affect the central art piece, placing the focus back on creativity rather than forcing artists to conform to trends. A true return to individuality
- Accessibility: CANVAS simplifies NFT creation, removing the skill gap necessary for creation. Even creators who are not skilled in traditional sketching and drawing will be able to create through prompts unique to them, working with AI as a collaborator to express their thoughts and ideas.

TOKENTRANSITION

THE GENESIS COLLECTION

For newcomers, there is an opportunity to secure an allocation via an NFT ///collection to be released alongside \$CANVAS. This is a 10,000-piece limitededition NFT drop by Nick Mystic. Unlike user-generated NFTs, these curated artworks are separate entities; cultural anchors handcrafted by our lead developer.

The first phase is the Genesis Phase (2,500 mints) this will do the following:

- Allocate 40,000 \$CANVAS tokens per NFT on a vested schedule.
- Grant premium community access to gated community Discord Channels.
- WL opportunities for future collaborations
- Access to community events and seasonal drops on the platform
- 100% mint proceeds injected into the liquidity pool.
- A cap of 5 NFTs per wallet for fair distribution.

Genesis holders are cultural pioneers, shaping CANVAS's origin story. As the platform grows so will the value of the NFT, and the benefits granted will expand along with that as we gain partnerships, more revenue, and more community members.

CANVAS opens the door to limitless potential for collaboration. In a space where communities that share the same ideals frequently come together to succeed, CANVAS will be able to serve as the glue.

In conjunction with the NFTs produced on the platform CANVAS will collaborate with communities to produce unique collections that combine the abstract nature of CANVAS with the artwork of some of the most popular communities in the space. We look forward to fostering growth, creating these collections to celebrate and spread our message, to unify others through art and creation. These collections will be keys to community exclusive events, and will continue to provide benefits as our platform and partner communities flourish. We plan to release a 5000 piece collection with each community we work with.

NFT communities will be able to plug their art into the CANVAS generator, leaving their central image intact while adding the traits from the built in gamification to their existing NFT. This adds another level of rarity to any NFT, and creates a brand new layer to the NFT market. We plan to collaborate with communities to create exclusive traits and limited time drops contingent on the communities we collaborate with. This will not only create camaraderie amongst existing members of the community, it will also serve as an invitation for newcomers to join as even the most common pieces in a collection will have the potential to obtain rare traits through the generator.

This creates limitless opportunities to co-create with others, and for the CANVAS movement to spread across the entire space. Once our genesis phase is complete we will begin collaborating with communities who share our ideals, and more importantly believe in the power of art and creation

CANVAS is not just a coin, it is a revolution.

TOKENOMICS AND MARKETPLACE

CANVAS will have built-in capability to list creations directly on OpenSea and Magic Eden, allowing for access to the secondary markets to flex creations, for users to generate revenue, and begin proliferating their art and our revolutionary trait system into the general market.

Sales Tax Mechanism: Fueling Growth, Not Extracting Value

\$CANVAS will have a supply of 999.1 million tokens, a 1:1 supply with \$LLM. In order to ensure long-term health, stability, and operational sustainability, CANVAS will implement a 2% sales tax on all buy and sell transactions of the \$CANVAS token. This mechanism is designed as a value recirculation system, reinforcing liquidity and supporting the full-time builders advancing the protocol.

Breakdown of the 2% Sales Tax:

1.75% - Liquidity Pool Reinforcement:

- This majority portion is automatically routed back into the liquidity pool.
- The goal: preserve price stability, reduce volatility, and grow the depth of the market over time.
- This function is either automated via the smart contract or executed through scheduled liquidity injections by a multisig-controlled treasury.

<u>0.25% - Core Contributor Operations Fund:</u>

- This small, capped portion of each transaction is sent to a transparent, multisig-controlled wallet managed by the core team.
- These funds are exclusively used to support the operational needs of the project: developer compensation, infrastructure costs, legal/compliance consultations, and day-to-day operations.
- As the project scales and achieves self-sustainability through protocol-native revenue (e.g., marketplace fees, minting, staking), this operational allocation may be phased out or adjusted through community governance.

Generation Fees and Supply Burn:

- Users can generate new artworks using \$CANVAS or Base-wrapped ETH
- The cost of generation is priced just slightly above compute costs, keeping creation cheap for users while ensuring long-term sustainability for the protocol
- Every 5th generation or fusion event automatically triggers a 50% margin burn, permanently reducing the circulating supply of \$CANVAS
- When paid in Base-wrapped ETH, the system will automatically market-buy and burn \$CANVAS, reinforcing demand and token velocity
- This burn will increase the scarcity of \$CANVAS over time, driving value while the sales tax will consistently inject liquidity into the LP to ensure long term sustainability. The more valuable \$CANVAS becomes, the more valuable all your creations do as well.

Final token allocation percentages will be made after the completion of the \$LLM token swap. We plan to make a public announcement prior to launch to release the final percentages, provide transaction hashes for the locked Developer tokens, as well as release the treasury address and wallet address so each transaction made is known by the community. Each transaction will also be announced via X once completed. We believe in protecting our community and keeping everybody as safe as possible. We can not grow without you.

CONCLUSION

We aim to redefine the NFT space, our platform is already created and functional, with proof of concepts to be released soon to demonstrate NFT creation, how the rarity system will be implemented, and the capabilities of our generator.

We are not just releasing a token, we are starting a revolution. We plan to be recognized among the major NFT platforms such as OpenSea and Magic Eden. Our internal marketplace is already in progress, and creators will soon be able to list their art directly on our platform instead of relying on a secondary market.

Follow us on X, join our Telegram and soon to be released Discord to be up to date on all the details leading up to our impending release.
